Table 2. Related documents

Document	Use in this paper
Collaboration Web Dev and SIA.pdf	Project objectives, reported problems, admission process, user responsibilities, and listed technologies. Referred to as the project brief.
Solution Design Document Template - Enterprise School Management System	Required section structure and design-document instructions. Referred to as the SDD template.

2. Executive summary

The Pamantasan ng Lungsod ng Pasig (PLP) Online Admission System (OAS) is a proposed web-based platform for centralizing applicant registration, document submission and verification, examination-related activities, and admission decisions. The project brief identifies repeated data entry, scattered submissions, limited application-status monitoring, delayed communication of results, and limited program guidance as problems in manual or fragmented admission processes.

The proposed system would allow applicants to submit their information, upload requirements, monitor application and document statuses, view examination schedules, and access printable documents. Admission personnel would review applications, record and release results, maintain programs and available slots, and generate admission reports. Applicants would see results only as Passed or Did Not Pass, while numerical scores would remain internal.

The system is a three-tier Laravel web application on one small Amazon EC2 server, with Nginx as a communication layer that every request passes through. It connects to the Document Management System (DMS), which stores every applicant file, and the Enrollment System, which receives admitted applicants, through secure REST APIs. Four roles use it: Applicant, Admission Personnel, Clinic.

The design is budget-first: only the EC2 server uses AWS free credits; MySQL runs on the same server, and email, monitoring and backups use free tools. A managed database and a second server are documented as the upgrade path.

3. Business context, objectives and scope

3.1 Organisation profile

The project brief identifies Pamantasan ng Lungsod ng Pasig as the client institution. Its detailed registration process covers freshmen applicants and lists the personal, educational, residency, and documentary information required for admission.

Table 3. Institutional figures reported in the project brief

Item	Reported approximate figure
Teachers, including part-time teachers	500
Students	10,000
Highest recorded applicant count	20,000

3.2 Business drivers

The project brief identifies repeated encoding, data-entry errors and duplicates, scattered documentary submissions, and slow retrieval and updating of applicant records. Applicants have limited access to status information and may need to contact the office for updates. Admission decisions are communicated manually or through separate channels, while applicants receive limited guidance on preferred programs. These reported problems motivate the proposed centralized admission platform.

3.3 Objectives and success measures

The general objective is to design and develop an Online Admission System that centralizes and streamlines applicant registration, entrance testing, requirements verification, and acceptance-status management to improve the efficiency, accessibility, accuracy, and organization of the admission process.

Table 4. Specific objectives

ID	Objective	Measure	Target
OBJ-01	Allow prospective students to create one account and submit personal, educational, and contact information online.	UAT testers who finish registration and the form without help; duplicate accounts per email	≥ 90% unaided; 0 duplicates
OBJ-02	Allow admission personnel to schedule entrance exams, issue printable permits, record attendance and record results.	Overbooked exam batches; results matching official exam records	0 overbooked; 100% match in audit sample
OBJ-03	Allow applicants to upload required documents and personnel to verify them with remarks.	Submissions reviewed within the agreed time; rejections with a remark	≥ 95% within 3 working days; 100% with remark
OBJ-04	Allow applicants to view their current application and document status.	Delay before a staff update is visible; testers who find their status unaided	≤ 1 minute; ≥ 90%
OBJ-05	Record and release exam results only through the system, with scores kept internal.	Results released outside the system; scores exposed to applicants in security tests	0; 0
OBJ-06	Centralize applicant records with a full change history.	Records in the central database; changes captured in the audit log; time to open a record	100%; 100%; ≤ 3 s
OBJ-07	Provide reports on applicants, statuses, results and document verification.	Required reports available; report figures matching database counts	All 6 reports; 100% match

OBJ-08	Send status updates and notifications to applicants.	Emails sent within 5 minutes of a status change	≥ 99%
OBJ-09	Allow applicants to submit medical requirements and Clinic staff to verify them.	Medical submissions verified on time; medical files opened outside the Clinic	≥ 95% within 3 working days; 0
OBJ-10	Exchange data with DMS and Enrollment through secure APIs.	Uploads stored in DMS; admitted applicants received by Enrollment; duplicate student records	100%; 100%; 0
OBJ-11	Protect applicant data with role-based access, 2FA and audit logs.	Staff accounts with 2FA; unresolved critical security findings at go-live	100%; 0

3.4 Scope

In scope	**Out of scope**
Applicant registration with email verification and one account per person	Payroll Management (no integration)
Online application form and suggested programs	Employee Management (no integration; possible future staff login source)
Document upload, verification, remarks and resubmission	Delivering the entrance exam online: the exam is taken in person on paper
Entrance exam scheduling (Batch A morning, Batch B afternoon), and permits	Enrollment, sectioning and student records after admission (Enrollment System)
Result recording (Passed / Did Not Pass), release and acceptance letter	Long-term file storage (DMS is the system of record for files)
Slot acceptance with deadline and automatic forfeit	Online payment of any admission fee
Medical requirements submission and Clinic verification	Mobile app (the web portal is mobile-responsive)
Email notifications and status timeline	
Reports, audit log and staff/role administration	
REST API integration with DMS and Enrollment	

4. Stakeholders and user personas

Table 5. Documented user roles

Persona	Approx. users	Key tasks	Primary channel	Peak load
Applicant	[number] per period	Register, fill the form, upload documents, check status, print permit and form, view result, accept slot, upload medical requirements	Web (mobile and desktop)	Last days before document deadline; result release day
Admission Personnel	[number]	Review queues, verify documents, schedule exams, check permits at the venue, record and release results, maintain programs and slots, run reports	Web (staff portal)	Daily during the review window; exam days
Clinic staff	[number]	Track medical submission counts, verify medical documents, flag suspected falsified documents	Web (staff portal)	After results release
System Administrator (IT)	1–2	Manage staff accounts and roles, API keys, backups, security settings, monitoring	Web (admin pages), SSH	Ongoing
DMS (system)	n/a	Receive and store applicant files; serve short-lived download links	REST API	Document deadline
Enrollment System (system)	n/a	Receive admitted applicants; return student numbers	REST API	After medical verification

Note - Section 4: Kailangan pa ang actual number ng users per role at estimated sabay-sabay na users sa peak periods. Nakasulat na web at mobile ang applicant channel, pero hindi pa malinaw kung mobile browser lang o may separate app. Hindi muna ako nagdagdag ng ibang user roles; kulang pa ang role para sa account administration, backups, at security settings.

5. Requirements

Functional requirements describe the system functions. The documented non-functional requirements concern access, confidentiality, and auditability. FR and NFR labels link these requirements to the component and traceability tables.

5.1 Functional requirements

Table 6. Functional requirements from the project brief

ID	Module	Requirement	Priority
FR-01	Accounts	Applicant registers with a verified email; one account per email; duplicates flagged by name and birthdate	Must
FR-02	Application	Applicant completes and submits the application form; system lists suggested programs	Must
FR-03	Documents	Applicant uploads required documents (PDF, JPG, PNG, up to 5 MB); files go straight to DMS	Must
FR-04	Documents	Personnel verify each document as Approved or Requires Resubmission with a remark; applicant re-uploads	Must
FR-05	Status	Applicant sees a status timeline and the status and remark of each document	Must
FR-06	Exam	Personnel schedule Batch A and Batch B with room capacity; system prevents overbooking	Must
FR-07	Exam	Applicant prints an exam permit with QR code and a copy of the application form; staff scan permits for attendance	Must
FR-08	Results	Personnel record Passed or Did Not Pass; scores stay internal; results are visible only after release	Must
FR-09	Acceptance	Passed applicant receives an acceptance letter and accepts a slot before a deadline; unaccepted slots are forfeited automatically	Must

FR-10	Medical	Applicant uploads medical requirements; Clinic verifies each item and can flag suspected falsification	Must
FR-11	Integration	Admitted applicants are sent to Enrollment; the returned student number is shown to the applicant	Must
FR-12	Notifications	Email on verification, 2FA codes, status changes, exam reminders, result availability and password reset	Must
FR-13	Reports	Applicants per program, status breakdown, document completion, exam attendance, pass rate, daily submissions, medical completion; export to Excel and PDF	Must
FR-14	Administration	Personnel maintain programs, slots and requirements before each period; System Administrator manages staff accounts and roles	Must
FR-15	Audit	Every change, login, release and API call is logged; nobody can edit or delete log entries	Must
FR-16	Documents	Automated pre-checks on uploads (blur, file type, OCR of document type) to assist reviewers	Could
FR-17	Interview	Applicants are given a schedule for an interview for their respective programs and results of the interview if they pass or not.	Must

5.2 Non-functional requirements

Table 7. Documented non-functional requirements

ID	Category	Requirement
NFR-01	Availability	99% availability during the admission period, excluding announced maintenance outside office hours
NFR-02	Performance	Pages and API responses under 2 seconds at p95 with approximately 10,000+ concurrent users; document upload completes within 10 seconds for a 5 MB file when DMS is healthy

NFR-03	Capacity	Handle the document-deadline and result-release peaks of 10,000+ applicants without manual intervention; emails queued and throttled
NFR-04	Security	JWT authentication; 2FA for all staff and for applicants on new devices and slot acceptance; RBAC on every request; TLS 1.2+
NFR-05	Privacy	Compliant with the Data Privacy Act of 2012 (RA 10173); medical files viewable only by Clinic
NFR-06	Recovery	RPO 24 hours (nightly backup), RTO 8 hours (restore from backup to a new server)
NFR-07	Accessibility	WCAG 2.2 AA for applicant pages; usable on phone screens
NFR-08	Auditability	Audit log retained for years; append-only
NFR-09	Maintainability	Standard Laravel structure, automated tests on critical paths, deployment through GitHub Actions

Note - Section 5.2: Wala pang agreed priorities at measurable targets para sa response time, availability, simultaneous users, accessibility, backup, at recovery. Kailangan ang mga ito para maging testable ang technical requirements. Hindi ginamit ang sample numbers sa template; hindi iyon PLP targets.

6. Current state and gap analysis

The project brief identifies process problems but does not name the existing software, repositories, or system owners. The table therefore records the described processes without assigning unverified system names or replacement decisions.

Table 8. Reported admission processes and gaps

Current system or process	Function	Data held or handled	Reported gap	Disposition
Repeated registration encoding	Collect applicant details	Applicant information	Data-entry errors and duplicate entries	Replace
Physical or scattered submissions	Check requirements	Applicant documents	Difficulty checking completeness	Replace
Fragmented applicant records	Retrieve and update records	Applicant records	Slow retrieval and updating	Replace
Office inquiries and separate result channels	Communicate status and decisions	Statuses and results	Limited status visibility and delayed communication	Retire

7. Target solution architecture

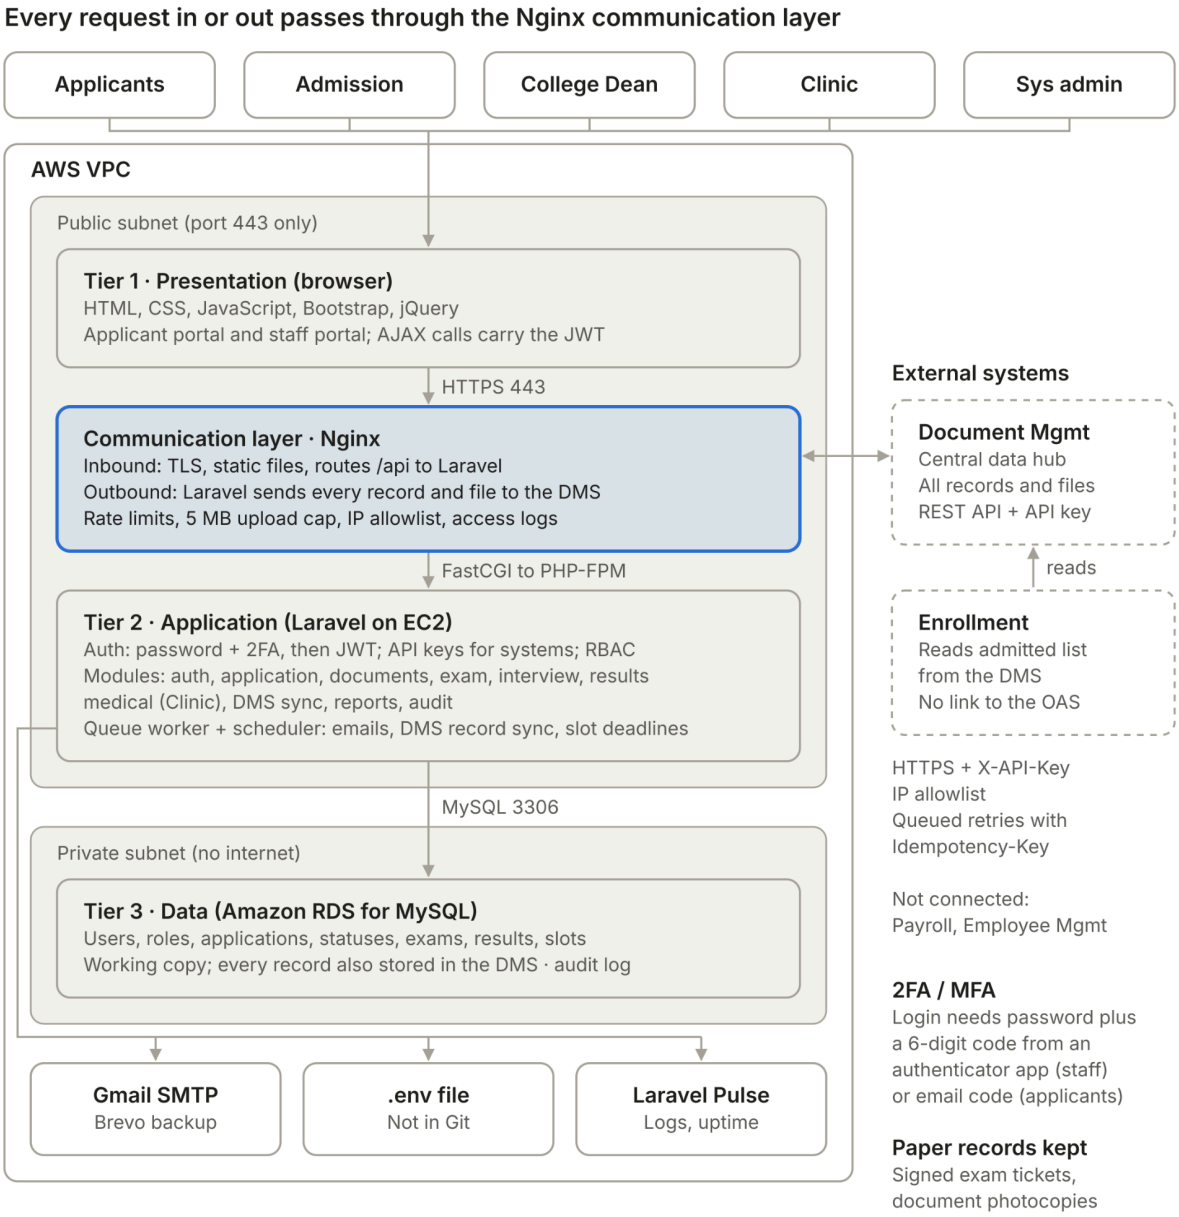

7.1 Architecture principles

Centralized applicant information is a main design priority. The proposed platform would bring applicant records and admission activities into a shared information system rather than leaving registration, verification, and results in separate records or channels.

Role-based responsibilities and controlled result visibility are also part of the documented design. Applicants would access their admission information, while admission personnel would perform review, scheduling, results, and reporting tasks. Numerical scores would remain internal, and admission personnel would not be allowed to administer accounts and roles, run backups, change security settings, or edit or delete audit-log entries.

7.2 Logical architecture

The project is described as a web-based platform with frontend, backend, and database technologies listed below. These identify the main application areas but do not specify a completed deployment or connection design.

7.3 Component responsibilities

Table 10. Functional responsibilities and requirement links

Component	Responsibility	Traces to
Presentation tier (HTML, CSS, JavaScript, Bootstrap, jQuery)	Applicant portal and staff portal; AJAX calls carry the JWT; no business logic	FR-02, FR-05, NFR-07

Communication layer (Nginx)	HTTPS, static files, routing to Laravel through PHP-FPM, 5 MB upload cap, rate limits, IP allowlist for partner callbacks, outbound proxy to DMS and Enrollment, access logs	NFR-04, INT-01, INT-02
Auth module	Registration, email verification, login with 2FA, JWT issue and refresh, password reset	FR-01, NFR-04
Application module	Application form, suggested programs, status workflow	FR-02, FR-05
Document module	Validation, malware scan, direct upload to DMS, verification and remarks	FR-03, FR-04, INT-01
Exam module	Batch scheduling and capacity, permit PDF with QR, check-in, result entry	FR-06, FR-07, FR-08
Results and acceptance module	Result release, acceptance letter, slot locking, forfeit job	FR-08, FR-09
Medical module (Clinic)	Medical uploads, Clinic verification, falsification flags, Admitted status	FR-10
Integration module	DMS and Enrollment API clients and callback endpoints	FR-11, INT-01, INT-02
Notification module	Queued email through Gmail SMTP with Brevo failover	FR-12, INT-03, INT-04
Reports module	Required reports with Excel and PDF export	FR-13
Audit module	Append-only log of changes, logins, releases and API calls	FR-15, NFR-08
Queue worker and scheduler	Emails, Enrollment handoff, slot-forfeit deadlines, cleanup	FR-09, FR-11, FR-12
MySQL 8 database	Users, roles, applications, statuses, exams, results, slots, DMS document IDs, audit log	FR-15, NFR-06
Monitoring (Laravel Pulse, Log Viewer, UptimeRobot)	Performance dashboard, searchable logs, downtime alerts	NFR-01

8. Data architecture and data protection

8.1 Core entities and system of record

The project calls for centralized applicant records in a database. The following information groups come from the documented process and outputs; they are not finalized database table names.

Table 11. Documented information groups

Entity or information group	Key information	System of record	Users of the information
Applicant and application record	Personal, educational, contact, residency, and program-preference details; application status.	Proposed OAS	Applicant; admission personnel
Document submission and verification	Required document, document status, and staff remark.	Proposed OAS and DMS	Applicant; admission personnel
Programs and slots	Programs, applicant choices, suggested programs, and available slots.	Proposed OAS	Applicant; admission personnel
Examination information	Schedule, permit, application form, roster, and attendance list.	Proposed OAS	Applicant-facing documents; personnel lists
Admission decision	Internal score, Passed or Did Not Pass result, and acceptance letter.	Proposed OAS	Personnel; applicant sees released result, not score
Applicant change history and audit logs	History of applicant-record changes and listed audit logs; detailed fields not specified.	Proposed OAS	Personnel can view applicant history; log-access details not specified

Registration fields include LRN; sex; surname, given name, and middle name; residency status; contact number; Pasig district and barangay; address; birthday; public or private school type; last school attended; strand; and first, second, and third program choices. Account registration also requires a valid email address.

The freshman documentary requirements listed in the brief are a PSA birth certificate; a government-issued ID of the parent; a notarized affidavit of guardianship for applicants with a guardian; two passport-size pictures with a white background and nameplate; a certified true copy of Form 137 marked "For Evaluation Purposes only" for senior high school graduates; a long brown envelope with a plastic envelope; a certified true copy of Grade 11 Form 138 for ongoing Grade 12 students; and a government-issued ID or school ID of the applicant.

8.2 Data classification

Class	Examples	Controls

Restricted	Medical documents and results, exam scores, password hashes, 2FA secrets	Named-role access only (Clinic for medical; scores never sent to applicants); access logged; stored in DMS or encrypted at rest
Confidential	Personal details, uploaded documents, application status, contact details	Owner and role-scoped access; ownership checks on every request; encrypted in transit and at rest
Internal	Exam rosters, review queues, reports	Staff roles only
Public	Program list, admission schedule, requirement list	No restriction

8.3 Retention and privacy

- Retention schedule per entity: [to be agreed with PLP, aligned to the PLP records-retention policy and RA 10173]. Audit logs are append-only and kept for [number] years.
- A Privacy Impact Assessment is completed and signed off by PLP's DPO before go-live; reference [PIA ID].
- Data residency: production data is stored on the EC2 server in [AWS region], and nightly encrypted backups go to [Google Drive].
- The DMS is the system of record for applicant files and records. Passwords, 2FA secrets and tokens stay in the OAS and are never sent to the DMS.
- Applicants include minors (ongoing Grade 12 students). Treat their data as children's personal data and limit access to the roles in the role matrix.
- Exam scores and interview grades are never shown to applicants, and medical files can be opened only by Clinic staff.
- Applicants accept a privacy notice at registration stating that their data is stored in the DMS and shared with Enrollment once admitted.

9. Integration architecture

The DMS is the central data hub. The Online Admission System (OAS) stores every record it produces in the DMS (accounts, applications, documents, results and statuses), and other PLP systems take the data they need from the DMS. The OAS has no direct connection to the Enrollment System.

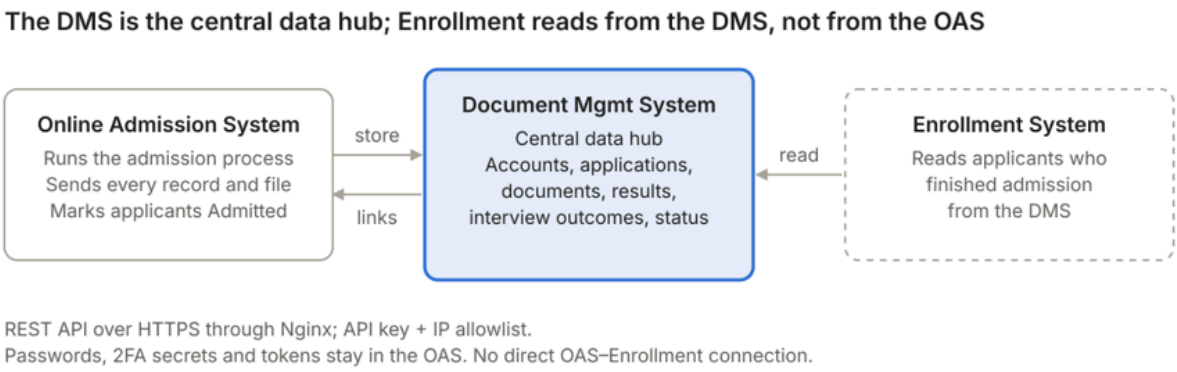

Figure 4. Data flow: the OAS stores in the DMS; Enrollment reads from the DMS

All OAS interfaces are REST over HTTPS with JSON, pass through the Nginx communication layer, and authenticate with an API key (X-API-Key header) restricted to known IP addresses.

9.1 Data the OAS stores in the DMS

Data	When it is sent	Pattern
Applicant account profile: ID, name, email, birthdate, contact details	On registration and each profile change	Queued record sync
Application form and program choices	On submission and each change	Queued record sync
Uploaded documents and medical files	On each upload or re-upload	Synchronous upload (applicant waits)
Document verification status and staff remarks	On each verification	Queued record sync
Photocopy received: per document, recorded by Admission Personnel (or Clinic for medical items) when the applicant submits the photocopy	When staff receive the photocopy	Queued record sync
Entrance exam schedule, attendance (QR scan of the printed ticket) and result (Passed / Did Not Pass; score flagged Restricted)	When recorded and when released	Queued record sync
Scanned copy of the signed exam ticket (optional, if PLP digitizes the signed tickets)	After the exam, when staff scan the collected tickets	File upload

Interview schedule, grade and outcome (Passed / Failed; grade flagged Restricted)	When the College Dean records the outcome	Queued record sync
Slot acceptance and medical verification status	On each change	Queued record sync
Admission completion: Admitted flag and completion date	Only when every stage is complete	Queued record sync; the record Enrollment reads
Status history for each applicant	With each status change	Queued record sync

Paper records still required. PLP keeps two paper records alongside the digital ones; the OAS tracks them but does not replace them:

- **Exam ticket:** the applicant prints the ticket from the OAS. It carries a QR code and signature lines for the applicant and the proctor. On exam day the proctor scans the QR code (attendance), and both sign the ticket. The Admission Office collects and keeps the signed tickets.
- **Photocopies of documents:** applicants also submit photocopies of their required documents to the Admission Office (medical items to the Clinic). Staff compare each photocopy with the uploaded file and mark it Photocopy received in the OAS.

9.2 Interfaces

ID	Interface	Direction	Pattern	Frequency	Data	Standard
INT-01	Document Management System	OAS ↔ DMS	REST: file upload (sync) and record sync (queued)	Per upload, per event	Records in 9.1, files, versions, short-lived download links	REST/JSON, multipart upload
INT-02	Enrollment System (via DMS)	DMS → Enrollment	DMS API read (not an OAS interface)	On demand	Applicants with the Admitted flag, their records and documents	Owned by DMS and Enrollment
INT-03	Gmail SMTP	OAS → Gmail	SMTP (queued)	Per event	Notification emails	SMTP over TLS (port 587)

INT-04	Brevo (backup email)	OAS → Brevo	SMTP (failover)	When Gmail fails	Notification emails	SMTP over TLS
INT-05	Backup storage	OAS → [Google Drive]	Scheduled job	Nightly	Encrypted database backup	spatie/laravel-backup
INT-06	UptimeRobot	UptimeRobot → OAS	HTTPS check	Every 5 minutes	Health check only	HTTPS

9.3 Key endpoints (proposed; to be agreed with the DMS team, which provides them)

Endpoint	**Purpose**
PUT /api/v1/applicants/{applicant_ref} (DMS)	Create or update the applicant record: profile, application and current status
POST /api/v1/applicants/{applicant_ref}/events (DMS)	Record a stage event: document verified, exam result, interview outcome, slot accepted, medical verified, Admitted. Idempotency-Key = event ID
POST /api/v1/documents (DMS)	Store a new applicant file; returns document_id and version
POST /api/v1/documents/{id}/versions (DMS)	Store a re-upload after Requires Resubmission
GET /api/v1/documents/{id}/download-url (DMS)	Short-lived link (5 minutes) for reviewers
GET /api/v1/applicants?admission_status=admitted (DMS, called by Enrollment)	Enrollment retrieves applicants who finished the admission process

10. Security, identity and compliance

10.1 Identity and access

The project lists JWT and role-based access control under authentication. Applicants are expected to create only one account using a valid email address. Access for admission personnel is bounded by the documented responsibilities and restrictions, including the prohibition on administering user accounts and roles, running backups, or changing security settings

10.2 Role matrix

Table 12. Permissions documented for the four roles

Role	Records	Docs	Exam	Interview	Medical	Reports	Users
Applicant	Own, edit until submitted	Own, upload	Own schedule, permit and result (no score)	Own schedule and outcome (no grade)	Own, upload	None	None
Admission Personnel	All, read and update status	Verify (non-medical); mark photocopy received	Schedule, check in tickets, record, release	Schedule; view outcomes	Status only	All reports	None
College Dean	Own college's applicants at interview stage, read	Read, own college's applicants	Result only (no score)	Record grade and Passed / Failed, own college	None	Interview reports, own college	None
Clinic	Medical stage only, read	None	None	None	Full: view, verify, log copies	Medical reports	None

Note - Section 10.2: Kailangan pang iidentify kung sino ang may responsibility sa user-account administration, backups, at security settings. Hindi muna nagdagdag ng Administrator role na may hinulaang permissions. Ang Not specified sa table ay kulang na permission detail, hindi ibig sabihing allowed ang action.

10.3 Security controls

Table 13. Listed controls and requirement links

Control or item	Documented purpose or restriction	Requirement link
JWT	Listed under authentication; detailed use is not supplied.	NFR-01
Role-based access control	Listed access approach; admission-personnel restrictions are defined in the brief.	NFR-01

Control or item	Documented purpose or restriction	Requirement link
Internal-score restriction	Only Passed or Did Not Pass is shown to applicants.	NFR-02
Audit logs	Listed security item; admission personnel cannot edit or delete entries.	NFR-03
API keys	Listed under security; purpose and connected service are not identified.	Not yet mapped

10.4 Compliance checklist

- Data Privacy Act of 2012 (RA 10173) and National Privacy Commission rules: privacy notice, consent, DPO review, breach procedure
- Privacy notice states that applicant data is stored in the DMS and shared with the Enrollment System once admission is complete
- Data-sharing agreement between the OAS, DMS and Enrollment owners: what data the DMS shares, with which systems, and for what purpose
- Paper records policy: storage, access, retention and shredding of photocopies and signed exam tickets
- Privacy impact assessment signed off by PLP's DPO
- Accessibility: WCAG 2.2 AA for applicant pages
- PLP records-retention policy for admission record

13.4 Appendices

A. Glossary

Table 14. Terms and labels used in this draft

Term	Meaning
PLP	Pamantasan ng Lungsod ng Pasig
OAS	Online Admission System
SDD	Solution Design Document
FR	Functional requirement; a numbered system function in Section 5.1.
NFR	Non-functional requirement; the listed access, confidentiality, and auditability conditions in Section 5.2.
OBJ	Objective identifier used in Section 3.3.
RBAC	Role-based access control, listed in the project brief.

B. Full requirements traceability matrix

Table 15. Requirement-to-component links; test-case links pending

Requirement	Component or area	Test case
FR-01	Registration and program preferences	Not yet prepared
FR-02	Registration and program preferences; suggestion rules unresolved	Not yet prepared
FR-03	Requirements submission and review	Not yet prepared
FR-04	Requirements submission and review; automation unresolved	Not yet prepared
FR-05	Status monitoring and notifications	Not yet prepared
FR-06	Examination administration	Not yet prepared
FR-07	Not finalized; online test-taking scope unresolved	Not yet prepared
FR-08	Admission decisions	Not yet prepared
FR-09	Program and requirement maintenance	Not yet prepared
FR-10	Applicant records and reporting	Not yet prepared
FR-11	Applicant records and reporting	Not yet prepared
FR-12	Status monitoring and notifications; delivery details unresolved	Not yet prepared
FR-13	Not specified; medical-submission workflow unresolved	Not yet prepared
NFR-01	Identity and access controls	Not yet prepared
NFR-02	Admission decisions	Not yet prepared
NFR-03	Applicant records and reporting / audit logs	Not yet prepared

Note - Appendix B: Requirements at functional areas pa lang ang naka-link dito. Kailangan pa ang actual test cases mula sa Section 12.3 at final components mula sa Section 7.3 bago maging complete ang traceability matrix. Hindi muna gumawa ng test IDs para sa tests na wala pa.

C. Detailed interface specifications

Note - Appendix C: Wala pang confirmed interfaces sa Section 9. Kung may actual integration na, ilagay rito ang final data fields, request at response details, access rules, at error handling. Kung wala talagang external integration, ipa-confirm kung dapat markahang Not applicable ang appendix na ito.

D. Vendor evaluation scorecard

Note - Appendix D: Wala pang vendor evaluation sa project files. Kailangan munang i-check kung required ito sa instructor para sa project natin. Hindi muna gumawa ng vendor names, ratings, o comparisons. Kung hindi applicable, kailangan munang ma-confirm bago alisin o imark.

E. Cost model: one-off and 5-year total cost of ownership

Note - Appendix E: Wala pang budget at cost breakdown. Kailangan ang actual one-time at recurring expenses bago gumawa ng total. Kailangan ding i-confirm kung required ang full five-year cost model para sa student project. Hindi muna naglagay ng prices, subscriptions, o estimated amounts na walang basis.
